

# What's **GROWING** **ON** in there?

## THE GRB HYDRO GARDEN

These **Farmshelf Hydro Garden** units are growing **vegetables**, **herbs**, and **edible flowers** that will be harvested & used in the preparation of plated meals for events here at the George R. Brown. The crops will go from seed to their first harvest in approximately **3 weeks**. After the first harvest, the plants will **re-grow** to be harvested and used again **weekly**. Each plant can be harvested **3 times** before needing to be replaced and having to start the seeding process again.

## OUR COMMITMENT TO SUSTAINABILITY

These Farmshelf Hydro Garden units grow food 2 to 3 times faster than conventional farming and are maintained by our **Houston Inspired Catering** culinary team. They were implemented as part of our joint commitment to **creative** and **responsible sustainability** in large venues.

**The crops we grow may change with the season but our dedication to sustainability and freshness will not.**

## QUICK FACTS

- Farmshelf reduces food waste and plastic packaging.
- This closed-loop hydroponic system uses 90% less water than conventional farming.
- Each unit uses custom, energy efficient LED lights.
