introducing air:core

AIR SANITIZATION SYSTEM

Cleaning the air of an enclosed environment should be a top priority for any workplace, dining, or hospitality setting. Bring your business back to life, and provide your staff and guests with clean air. The air:core filtration system is a large space sanitization solution that uses industrial grade germicidal UV-C lamps and MERV8/HEPA filtration to trap and deactivate Coronavirus and other pathogens in the air, effectively reducing airborne transmission in a space up to 3,000 cubic feet. Multiple units can be combined with air circulators to accommodate larger spaces.

features

- Design based on peer reviewed research and empirical measurements.
- Unique 360° intake design with top surface exhaust
- Powerful 400 cubic feet per minute blower provides 8 air change overs per hour*
- UV-C irradiation to deactivate pathogens. **
- (6) 48" UV-C Bulbs and (6) 36" UV-C Bulbs for sterilization & sanitization **
- MERV8 Prefilter for dust, pollen, & debris
- Medical Grade HEPA Filter traps pathogen/particulate smaller than .15 µm ***
- 5' Cord with lockable casters and entry door

Overall Dimensions - 32" w x 32" d x 54" h

Choose from our standard finishes. Custom finishes and grill patterns available.
